01 GROUP MEMBERS AND ROLES

MEMBER	RESPONSIBILITIES IN ASSIGNMENT 2
Amaan Ali (lead)	Lead developer (full stack): designed and built the site end to end, including the cart and mini cart, Stripe checkout with subscriptions, journal, social section, SEO, design system and deployment on Vercel.
Ronnie Abed	Payment testing on the live site (approved, declined and subscription test payments); SEO checklist and evidence; report sections 3–4.
Harsh Koli	Content marketing plan and social media strategy; review of the three blog posts; report editing and final PDF.

02 WEBSITE AND BUSINESS CONCEPT

Rep Theory is an online store based in Waterloo, ON, with prices in Canadian dollars. It sells two kinds of products that work together. **Equipment** fixes the weak links that end a set early: custom lifting straps, figure-8 straps, wrist wraps, a neutral-grip lat bar, a tricep rope, and barbell clips ($24–$65). **Programs** are 12-week Hypertrophy, Cutting, and Strength plans ($45–$49), plus **1:1 Coaching** as a $129/month subscription. Assignment 1 launched the storefront. Assignment 2 turns it into a store that people can buy from, find through search and follow on social media.

WHO IT'S FOR

For lifters around 18 to 30 who train three to five times a week and want straightforward gear and plans without the hype.

HOW IT EARNS

We make money by selling gear and programs once, plus monthly coaching subscriptions.

WHY IT'S DIFFERENT

Every product solves one specific problem, and every price and claim is stated plainly.

03 IMPLEMENTED FEATURES AND TOOLS

REQUIREMENT	WHAT WE BUILT	STATUS
Shopping cart	Add, remove (with Undo) and update items; saved in the browser so it persists across pages; shows options, totals, shipping ($9.99, free over $75 of gear) and 13% HST. A mini cart opens from every page.	✓ Done
Payment gateway	Stripe Checkout in test mode, for one-time items and the monthly coaching subscription in one cart. Prices are re-checked on our server; the confirmation page reads its details from Stripe.	✓ Done
SEO	Unique titles, descriptions and keywords on all 13 pages, alt text, sitemap, robots.txt and structured data.	✓ Done
Content marketing	There are three original blog posts, each about 560 words. Posts include topic filters, share links, and links to products.	✓ Done
Social media	Instagram, TikTok, X and Facebook icons, plus an Instagram-style "Follow the build" section with six planned posts.	✓ Done

Design choice: checkout is guest-only (no accounts), which keeps buying quick and reduces the personal data we store. Accounts and a self-serve page for managing coaching are planned for a later version.

Security: the browser sends product IDs and quantities. Our server re-prices every order and adds shipping and HST, so Stripe's total always matches the cart; card details are entered on Stripe's page.

Tools: Next.js 16 and React 19 with TypeScript and Tailwind CSS · Stripe (test mode) for payments · Vercel hosting, deploying automatically from GitHub · Chrome Lighthouse for the SEO audit.

A COMPLETE TEST PURCHASE

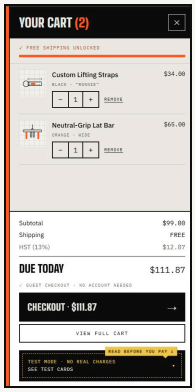

FIG 1 · MINI CART

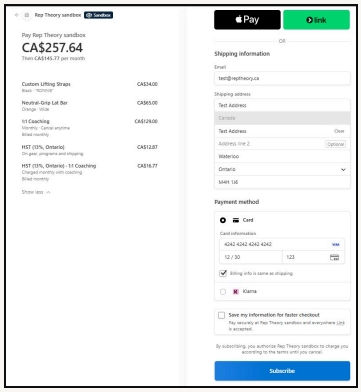

FIG 2 · STRIPE CHECKOUT

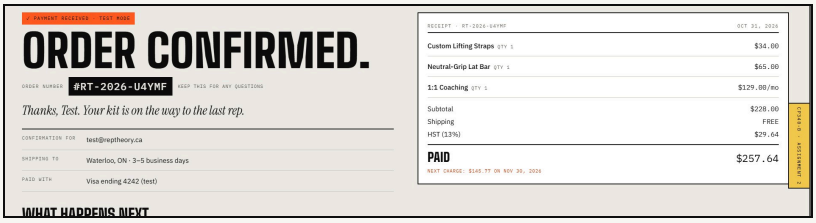

FIG 3 · ORDER CONFIRMED

FIG 4 · STRIPE DASHBOARD (TEST PAYMENTS)

The test order above ($257.64 today, then $145.77/month for coaching) appears in Stripe exactly as our cart totalled it. A declined test card (4000 0000 0000 0002) is refused without any charge.

04 MARKETING AND SEO STRATEGIES

CONTENT MARKETING PLAN

Target audience. Recreational lifters in Canada, about 18–30 (students and young professionals). They train 3–5 times a week, are past the beginner stage, and keep hitting limits like grip or wrist failure before the target muscle. They are wary of supplement-style hype.

> *Anyone can do the first rep. We make gear and programs for the one after you want to quit.*

Voice. Plain, practical and honest: short sentences, real numbers, no miracle claims.

BLOG POST	PILLAR	LEADS TO
How to set up lifting straps	Gear how-to	Custom Lifting Straps
Deload weeks, explained	Training	Hypertrophy program
Cutting without losing strength	Nutrition + training	Cutting program

Each post answers a question our audience already searches for, targets one keyword phrase (e.g. "how to use lifting straps", "deload week") and ends with a link to the product it relates to. **Calendar:** one journal post a week, each cut into 2–3 social posts.

SOCIAL MEDIA PROMOTIONAL STRATEGY

PLATFORM	FREQUENCY	ROLE AND TONE
Instagram	3 posts / week (Mon, Wed, Fri) + daily stories	Main channel. Gear close-ups, form tips and quote cards in our black, chalk and orange look.
TikTok	2–3 short videos / week	We post 15- to 30-second form fixes, like "the strap mistake most lifters make." The tone is casual, like talking on the gym floor.
X and Facebook	With each new post	X and Facebook are used to share journal links. Facebook specifically targets parents purchasing gifts.

SAMPLE · INSTAGRAM

"Your back can do 5 more reps. Your grip can't. Straps fix the weak link. Three-step setup on the journal, link in bio. #reptheory #liftingstraps"

SAMPLE · TIKTOK

"Week 6 of your program feels easy on purpose. Here's why a deload makes you stronger, in 20 seconds. #deload #gymtok"

SAMPLE · X

"Cutting doesn't have to cost you your bench. Heavy weights, modest deficit, high protein. New post: rep-theory.vercel.app/blog"

Social status: the icons and planned post grid are live on the site. The accounts are planned for launch, so links show "launching soon" instead of pointing to profiles that don't exist yet.

SEO CHECKLIST

ITEM	HOW WE DID IT	CHECK
Keywords	One focus phrase per page in its title, H1 and opening text (e.g. "lifting straps").	✓
Meta titles	Unique on every page, under about 60 characters: "Page | Rep Theory".	✓
Meta descriptions	Each meta description is unique, 80–170 characters, and clearly states the page's purpose.	✓
Alt text	Described every product drawing and diagram, e.g. "Technical drawing of the Custom Lifting Straps".	✓
Crawling	sitemap.xml lists all public pages; robots.txt keeps cart and checkout out of search.	✓
Rich results	Structured data for the store, products and posts; share preview image.	✓
Audit	Google Lighthouse on the live home page: SEO 100/100, Accessibility 96/100.	✓

05 CHALLENGES AND LESSONS LEARNED

We had to handle both one-time items and subscriptions, and since Stripe treats these differently, we split tax and shipping to make sure Stripe's total matched our cart. The main takeaway: plan out the money flow before you start coding. For the cart, since it's stored in the browser and can be changed, the server always recalculates the price for every order. The lesson here: never trust data from the client. When a team member left mid-assignment, clear notes and a consulting setup helped us stay on track. This showed us that good documentation is just as important as the code itself. Finally, we found layout bugs by testing on phones and wide screens, not just laptops, and fixed them before launch. The lesson: always test on real hardware and screen sizes.

Use of generative AI. We used Claude (Anthropic), including its design tools, as an assistant throughout this project: to explore layouts for the website and this report, to help us understand how to build a complete e-commerce site and set up Stripe, to suggest code, and to draft early versions of the blog posts and report text. We worked on the project together and made the final design and content decisions. All AI-assisted material was reviewed, fact-checked and revised by the authors to reflect our own understanding and learning.
